To Whom It May Concern,

I have more than fourteen years of experience making and designing graphics for various companies and events. I first started graphic design when I was in fifth grade. My dad owns a screen printing shop in Davison, Michigan. When he started his business, I became interested in the graphics and computer technology. I quickly began getting more involved in designing and computers, so much that I chose to make that my career. I am currently attending the University of Pikeville in Pikeville, Kentucky. I will be graduating in May with Computer Science and Mathematics Majors. While attending Pikeville, I developed skills useful for a career in graphic design. I studied subjects like web design, database analysis, and even desktop publishing. I believe that all of my experiences in school and in previous job positions I've held, have prepared me quite a bit for a future in the graphic design field.

I have become very familiar with CorelDraw over the years. However I have some experience working with AdobeIllustrator, InDesign and C++. Most of my work includes designs for various high school groups and sports teams. I have also produced a few company logos, banners and signs as well as newsletters and posters. I put my heart into every one of my designs. I have been told multiple times that I am extremely efficient. I can produce quality work in very little time.

In the previous positions I've held, even though some are not directed towards graphics, I gained some essential teamwork and communication skills. At the East Kentucky Expo I managed a bar for concerts and catered events. I had to develop exceptional people skills. I dealt with difficult customers at times but still had to keep composure and handle every situation with professionalism. I believe those are the skills that will also contribute to the graphic design field in a non-artistic way. I'm very confident that blending my artistic talent, computer knowledge and positive attitude makes me an important asset to any company looking to expand.

I look forward to speaking with you about the opportunities you have available and my ability to help your team grow and prosper. Please feel free to take a look at my digital portfolio at this website <http://cmcine00.wix.com/graphic-design>.

Thank you,

Christene McInerney
